

Abstract

Convertible Vehicle

5 In a convertible vehicle (1) with a roof (3) that can be folded down under a cover  
part (6) in a rear vehicle area (2), whereby the cover part (6) can alternatively be  
opened to release (8) a loading opening for luggage or to release (7) a passage  
opening for the roof (3) and for this reason is held by at least one movement  
10 mechanic (9) in the vehicle (1), the movement mechanic (9) comprises at least  
one multi-link chain (11) with, in each case, an excess number of links (16; 17;  
28; 30; 32) for the movement of the cover part (6) in the release direction (8) of  
the loading opening for luggage or in the release direction (7) of the passage  
opening for the roof (3), whereby during each of the named movements at least  
15 one link (17; 28) is blocked. (Fig. 1).
